

Before you begin your journey in uSucceed, let's walk through a quick tutorial on how to use your VR controllers and interact with your personalized assistant, Robi.

Controller Overview:

- **Joysticks for Navigation:**
 - The **left joystick** controls your movement. Push it forward or backward to move in those directions, and push it left or right to strafe.
 - The **right joystick** rotates your digital avatar. Use it to turn and change your perspective.
- **Trigger Buttons for Interaction:**
 - To select or interact with objects, point your controller at the item and press the **trigger button**.

Adjusting Movement Speed:

- Use the **left joystick** to control your movement speed:
 - Push the joystick **halfway forward** for a slower pace.
 - Push it **all the way forward** for normal speed.
 - For faster movement, press the **joystick button** down while pushing it all the way forward.

Interacting with Robi:

- To summon Robi, press the **B button** on your right controller. Look around until you see Robi appear in the scene.
- Once you spot Robi, press the **A button** on the same controller to start the conversation.
- Wait for Robi to ask, "How can I help you?" before speaking. Robi won't hear you if you start talking too soon or while Robi is speaking. Make sure to let Robi finish responding to your questions or requests without interruption.

Feel free to ask Robi simple questions, like "What is cybersecurity?"

Handling Objects:

- Use the **Grip buttons** on either side of your controllers to pick up, hold, and drop cybersecurity icons into the correct box.
